

7 Concept

1 Prolongation of building life span

(Flexibility, Maintainability, Refurbishment, Enhancement of durability)

2 Restraint use of halogen and fluoro carbon gas

(Non-use of halogen & chloro fluoro carbon dependant systems, Replacement of fluoro carbon containing materials)

3 Restraint use or non-use of poisonous materials

(Restraint use or non-use of poisonous materials, Disposal of poisonous materials)

4 Resources and energy conservation

(Resources and energy conservation during construction process, Energy conservation when buildings are in use, Effective utilization of natural energy, Enhancement of energy utilization)

5 Respect to natural environment

(Grasping and analyzing environment features of site & surrounding areas, Reduction of environmental load to local environment)

6 Use promotion of recycled or reprocessed materials

(Active commitment to recycling or reprocessing of by-product materials, Extended use of recycled or reprocessed materials)

7 Reduction of disposed materials

(Reduction of unused or disposed materials created during the construction or utilization of buildings)

The Seven Strategic Issues
